Session 2.2 | Uwe Marquard | Sevilla | 13.05.2026

European Stack for Agentic Geospatial Intelligence Services

Sovereign. Trusted. Intelligent. Actionable.

Where are we today ?

Every layer of the proposed stack exists in European programmes, but:

- **distributed across multiple initiatives**
- **mainly research and development projects**
- **not yet unified into a single reference architecture**

Europe can succeed if:

- **Public policy creates sovereign demand**
- **Industry builds operational platforms**
- **Value is captured in trusted decision systems**
